1. Introduction

Bridges the gap between HDMI 2.1 eARC displays and legacy AV receivers by de-embedding ARC/eARC audio from any 8K-capable TV or HDMI source and routing it via HDMI directly to the amplifier — no AVR replacement required. Fully compliant with HDMI 2.1 and HDCP 2.3, supporting data rates up to 48Gbps FRL with zero video and audio latency.

Designed for CEDIA integrators specifying retrofit and new-build installations, the AUD-AMP-8K handles video resolutions up to 8K@60Hz and 4K@120Hz with full HDR pass-through (HDR10, HDR10+, Dolby Vision, HLG) and HDMI 2.1 protocols including VRR, ALLM, QMS, QFT, and SBTM. Eight DIP-switch EDID modes, CEC volume control, and a USB-C firmware update port ensure long-term serviceability in the field.

Troubleshooting

Q: No audio from the amplifier?

A: Verify the eARC button is set to the correct mode. If using eARC audio return, ensure ARC/eARC is enabled in the TV's audio settings. Check that the amplifier's HDMI input is connected to the Amp AUDIO OUT port. Try toggling the eARC button to reset the CEC handshake.

Q: eARC LED is flashing — what does that mean?

A: Flashing eARC LED indicates ARC/eARC is enabled but CEC communication or the ARC channel is not established. Check HDMI cable quality and ensure Premium High Speed HDMI cables (48Gbps rated) are used on all connections. Verify CEC is enabled on both the TV and the source device.

Q: No video on the display?

A: Confirm Ultra HDMI 2.1 cables are used for 8K@60Hz signals (2–3m max). For 4K@60Hz, standard Premium HDMI up to 5m is sufficient. Check the EDID DIP switch setting matches the display's capability. Try DIP mode [111] to copy the TV's EDID automatically.

Q: How do I update the firmware?

A: Connect a USB Type-C cable from a PC to the SERVICE port. Contact KanexPro support at support@kanexpro.com for firmware files and update instructions.
